Career Counseling and an Entrepreneurship Development Program Special guest Mr. Mohammed Arif Hussain

Students have a lot of decisions to make while they're in college. These range from which courses to take up apart from their core subjects, to deciding which internships would benefit their career. However, the single biggest decision that any college student needs to make revolves around what to do after college. As a matter of fact, almost every other choice that a student makes in college revolves around his/her plans after college, be it studying further or taking up a job. Deciding what to do after college has a significant impact on your immediate future as well as long term goals. This decision gets difficult because there are several factors that impact it, such as interests, costs, opportunities etc. For example, you might realize while pursuing your degree that your true passion lies somewhere else, and you might decide to pursue a career in that field after college. But what if that career requires you to pursue a separate course after your graduation, something that you're not willing to do?

To ensure that you don't make a wrong a decision at this crucial juncture in your life, it helps to consult a Career Counselor. A Career Counselor will guide you through this whole decision making process and will give suggestions that are beneficial for you with regards to whether you should take up a job after college or pursue a postgraduate course.

Additionally, a Career Counselor will also help in developing contingency plans in case things don't work out (not getting admission in the desired course or not getting a job etc.).Not only that, but he/she will also help you make decisions in case you wish to alter your career goals after college. In such scenarios, a Career Counselor will help you decide whether it is worth it to completely change your career focus or not, and if yes, then should you first take up a course in that career or directly apply for a job.

Our goal is to nurture the talents of the students ,empowering graduates who will flourish and change the world for better.

Pursuing Postgraduate Education:

A large number of students today choose to pursue a postgraduate course after college. Even though specialized education is beneficial academically, it might or might not benefit each individual and every field. Additionally, is it better to pursue that postgraduate course (if at all) straight after college or after gaining a few years of work experience?

Deciding whether to pursue a postgraduate course after college or not is a decision that your Career Counsellor will help you in making. He/she will keep your course, career, personality and interests in mind while guiding with regards to what to do next.

For people who are sure about their career goals and want to pursue a postgraduate course in the same field, a Career Counsellor will help them decide whether it is genuinely worth it to invest

more time and money into further studies or take up a job directly. For example, it might be ideal for a B.Sc. in Chemistry graduate to pursue an M.Sc. after college if the big goal is to join the academia, but a graduate in Mass Communication might be better off joining the workforce as an entry – level employee rather than pursuing a Master's course in the same field if the objective is to work in the industry.

Not only that, but if at all you do have to pursue a postgraduate course, then what is the best time to do it? Would you be better off gaining some working experience before you choose to do so, or is it better for you to join that postgraduate course as soon as possible? A Career Counsellor will help you in deciding this. There are scenarios in which the decision becomes complex, for example, in case you wish to pursue a career which is completely unrelated to your college degree. This generally happens when you choose to prioritize your inherent passions and skills over your academic knowledge.

In such circumstances, a Career Counsellor will help you decide whether changing careers is worth the risk or not. And if it is, then should you pursue a postgraduate course in that field first or take up a job? No single decision is applicable to all students. Different choices are suitable for different situations and a lot depends on a person's skills, interests, strengths and personality.

A Career Counsellor will understand your needs and guide you towards the best possible route for you, keeping your individuality in mind.

So what are the benefits of pursuing a business degree right after engineering?

Benefit 1: Having a business degree with an engineering undergrad degree opens the door to many opportunities. These days employers expect more from engineers. Engineers have also been tasked with taking care of management related tasks apart from technical assignments. Engineers who possess key management skills are sought after by employers. This is where the Business degree comes to rescue.

Benefit 2: If you're a people person with a passion for business and felt stuck in a core technical job, it makes sense to pursue a business degree and shift your focus to more people-centric domain like Marketing, Advertising, etc.

Benefit 3: It is easier to create a bigger impact in a business domain than it is by working in a core technical job.

Whatever your reason might be, no one can deny that once you're done with your masters degree you have access to more job opportunities in the field you like. Plus getting a substantially higher package never hurts
