ORDINARY DIFFERENTIAL EQUATIONS AND VECTOR CALCULUS								
I Year - II Semester: ECE, CSE, CSE (AI & ML), CSE (Data Science), CE & ME								
Course Code	Category	Hours/Week			Credits	Maximum Marks		
MA201BS	Foundation	L	T	P	C	CIA	SEE	Total
		3	-	-	3	40	60	100
Contact Classes: 48	Tutorial Classes: Nil	Practical Classes: Nil				Total Classes: 48		
Prerequisite: Mathematical Knowledge at the pre-university level								

1. COURSE OVERVIEW

This course serves as a foundation course on differential equations and vector calculus. It includes techniques for solving ordinary differential equations, partial differential equations, vector differentiation and vector integration. It is designed to extract the mathematical developments, and skills, from basic concepts to advanced level of engineering problems to meet technological challenges.

2. COURSE OBJECTIVE

The students will try to Learn:

- 1) Methods of solving the differential equations of first and higher order.
- 2) Concept, properties of Laplace transforms
- 3) Solving ordinary differential equations using Laplace transform techniques
- 4) The physical quantities involved in the engineering field related to vector-valued functions
- 5) The basic properties of vector-valued functions and their applications to line, surface and volume integrals

3. COURSE OUTCOMES

After successful completion of the course, students should be able to:

CO 1	Identify whether the given differential equation of first order is exact or not.
CO 2	Solve higher differential equations and apply the concept of differential equations to real-world problems.
CO 3	Use the Laplace transforms techniques to solve ODEs.
CO 4	To find Gradient, Divergence, Curl and Vector identities
CO 5	Evaluate the line, surface and volume integrals and convert them from one to another

4. COURSE CONTENT

UNIT - I: First Order Ordinary Differential Equations

8 L

Exact differential equations – Equations reducible to exact differential equations – linear and Bernoulli's equations – Orthogonal Trajectories (only in Cartesian Coordinates).

Applications: Newton's law of cooling – Law of natural growth and decay.

UNIT - II: Ordinary Differential Equations of Higher Order

10 L

Second-order linear differential equations with constant coefficients: Non-Homogeneous terms of the type e^{ax} , $\sin ax$, $\cos ax$, polynomials in x , $e^{ax}V(x)$, and $xV(x)$, Method of variation of parameters.

10 L

UNIT - IV: Vector Differentiation

10 L

UNIT-V: Vector Integration

10 L

1. COURSE OVERVIEW

This course introduces fundamental principles of Engineering Mechanics, focusing on analyzing static and dynamic systems relevant to civil engineering. It covers force systems, free body diagrams, and equilibrium conditions in structures. Students explore friction, area moment of inertia, and apply Parallel and Perpendicular Axis Theorems to analyze structures. The course also includes kinematics of particles to understand motion in engineering contexts. Key concepts like the work-energy principle are applied to solve real-world civil engineering problems efficiently.

2. COURSE OBJECTIVE

The objectives of the course is to:

- 1) Provide Knowledge of force systems and free body diagram to analyze rigid body equilibrium
- 2) Comprehend the principles of Friction and solve engineering mechanics problems associated with frictional force
- 3) Compute the centroid, first moment and second moment of an area
- 4) Impart the concept of motion of particles and rigid bodies.
- 5) Familiarize the concepts of work-energy method and its applications to translation, rotation and plane motion and the concept of vibrations

3. COURSE OUTCOMES

After successful completion of the course, students should be able to:

CO 1	Determine resultant of forces acting on a body and analyze equilibrium of a body subjected to a system of forces.	Apply
CO 2	Solve problem of bodies subjected to friction.	Apply
CO 3	Find the location of centroid and calculate moment of inertia of a given section.	Apply
CO 4	Understand the kinetics and kinematics of a body undergoing rectilinear, curvilinear, rotatory motion and rigid body motion.	Apply
CO 5	Interpret and implement work-energy principle and its applications.	Understand

4. COURSE CONTENT

UNIT - I:

Introduction to Engineering Mechanics– Force Systems: Basic concepts, Particle equilibrium in 2-D & 3-D; Rigid Body equilibrium; System of Forces, Coplanar Concurrent Forces, Components in Space – Resultant-Moment of Forces and its Application; Couples and Resultant of Force System, Equilibrium of System of Forces, Free body diagrams, Equations of Equilibrium of Coplanar Systems and Spatial Systems; Static Indeterminacy.

UNIT - II:

Friction: Types of friction, Limiting friction, Laws of Friction, Static and Dynamic Friction; Motion of Bodies, Ladder friction.

Centroid and Centre of Gravity -Centroid of Lines, Areas and Volumes from first principle, centroid of composite sections; Centre of Gravity and its implications. –Theorem of Pappus.

UNIT - III:

Area moment of inertia - Definition, Moment of inertia of plane sections from first principles, Theorems of moment of inertia, Moment of inertia of standard sections and composite sections; Product of Inertia, Parallel Axis Theorem, Perpendicular Axis Theorem. Mass Moment of Inertia: Moment of Inertia of Masses-Transfer Formula for Mass Moments of Inertia – Mass moment of inertia of composite bodies.

UNIT - IV:

Kinematics of Particles: Kinematics of particles – Rectilinear motion – Curvilinear motion – Projectiles. Kinetics of Particles: Kinetics of particles– Newton’s Second Law– Differential equations of rectilinear and curvilinear motion–Dynamic equilibrium–Inertia force–D. Alembert’s Principle applied for rectilinear and curvilinear motion.

UNIT-V:

Work-Energy Principle: Equation of translation, principle of conservation of energy, work-energy principle applied to particle motion and connected systems, fixed axis rotation. Impulse– Momentum Principle: Introduction, linear impulse momentum, principle of conservation of linear momentum, elastic impact and types of impact, loss of kinetic energy, co efficient of restitution.

1. COURSE OVERVIEW

Course is about to design and analyze Analog circuits and systems using fundamental principles of Electronic Devices.

2. COURSE OBJECTIVE

The students will try to Learn:

- 1) To understand magnetic circuits, DC circuits and AC single phase and three phase circuits.
- 2) To study and understand the different types of DC, AC machines and Transformers.
- 3) To import the knowledge of various electrical installations.
- 4) To introduce the concept of power, power factor and its improvement.
- 5) To introduce the concepts of diodes and transistors, and
- 6) To impart the knowledge of various configurations, characteristics and applications.

3. COURSE OUTCOMES

After successful completion of the course, students should be able to:

CO 1	To analyze and solve electrical circuits using network laws and theorems.
CO 2	To understand and analyze basic Electric and Magnetic circuits
CO 3	To study the working principles of Electrical Machines
CO 4	To introduce components of Low Voltage Electrical Installations
CO 5	To identify and characterize diodes and various types of transistors.

4. COURSE CONTENT

UNIT – I:

D.C. Circuits: Electrical circuit elements (R, L and C), voltage and current sources, KVL and KCL, analysis of simple circuits with dc excitation. **A.C. Circuits:** Representation of sinusoidal waveforms, peak and rms values, phasor representation, real power, reactive power, apparent power, power factor, Analysis of single-phase ac circuits, Three phase balanced circuits, voltage and current relations in star and delta connections.

UNIT – II:

Electrical Installations: Components of LT Switchgear: Switch Fuse Unit (SFU), MCB, ELCB, MCCB, Types of Wires and Cables, Earthing. Types of Batteries, Important Characteristics for Batteries. Elementary calculations for energy consumption, power factor improvement and battery backup.

UNIT - III:

Electrical Machines: Working principle of Single-phase transformer, equivalent circuit, losses in transformers, efficiency, Three phase transformer connections. Construction and working principle of DC generators, EMF equation, working principle of DC motors, Torque equations and Speed control of DC motors, Construction and working principle of Three phase Induction motor, Torques equations and Speed control of Three phase induction motor. Construction and working principle of synchronous generators.

UNIT - IV:

P-N Junction and Zener Diode: Principle of Operation Diode equation, Volt, Ampere characteristics, Temperature dependence, Ideal versus practical, Static and dynamic resistances, Equivalent circuit, Zener diode characteristics and applications. Rectifiers and Filters: P-N junction as a rectifier, Half Wave Rectifier, Ripple Factor, Full Wave Rectifier, Bridge Rectifier, Harmonic components in Rectifier Circuits, Filters – Inductor Filters, Capacitor Filters, L- section Filters, π - section Filters.

UNIT - V:

Bipolar Junction Transistor (BJT): Construction, Principle of Operation, Amplifying Action, Common Emitter, Common Base and Common Collector configurations, Comparison of CE, CB and CC configurations. Field Effect Transistor (FET): Construction, Principle of Operation, Comparison of BJT and FET, Biasing FET.

BUILDING PLANNING AND CONSTRUCTION								
I Year - II Semester: Civil Engineering								
Course Code	Category	Hours/Week			Credits	Maximum Marks		
CE204PC	Core	L	T	P	C	CIA	SEE	Total
		3	-	-	3	40	60	100
Contact Classes: 48	Tutorial Classes: Nil	Practical Classes: Nil				Total Classes: 48		
Prerequisite:								

1. COURSE OVERVIEW

This course introduces the fundamentals of building design, including proper orientation and key principles of planning for functionality and aesthetics. It covers essential regulations through building bye-laws to ensure compliance and safety. Students explore structural elements such as types of foundations, floors, roofs, stairs, doors, and windows. The curriculum includes finishing works and construction techniques like scaffolding, formwork, and centering. Practical knowledge equips learners to plan and execute building projects effectively from foundation to finish.

2. COURSE OBJECTIVE

The objectives of the course is to:

- 1) Provide fundamental knowledge about buildings and the influence of climate, orientation, and landscaping on building planning and design.
- 2) Impart understanding of planning principles.
- 3) Familiarize students with the National Building Code (NBC), its structure and guidelines for residential buildings,
- 4) Develop knowledge of key building components
- 5) Introduce various finishing works and temporary structures.

3. COURSE OUTCOMES

After successful completion of the course, students should be able to:

CO 1	Understand the classification of buildings, criteria for site selection, the impact of climate on building design, and the role of orientation and landscaping in planning.	Understand
CO 2	Apply the principles of planning and interpret building bye-laws to design functionally efficient, economical, and regulation-compliant buildings.	Apply
CO 3	Interpret and implement provisions of the National Building Code (NBC) related to residential buildings and understand basic construction techniques including foundations and masonry.	Apply
CO 4	Identify and analyze various types of floors, roofs, staircases, doors, windows, and lintels used in building construction and their suitability for different design conditions.	Apply
CO 5	Demonstrate knowledge of finishing works such as plastering, pointing, and floor finishes, and explain the types, design, and safety aspects of scaffolding, formwork, and centering.	Apply

4. COURSE CONTENT

UNIT – I:

Fundamentals of Buildings: Building, Classification of buildings, Site selection for Residential buildings, Climate and its influence on building planning; Elements of Climate, Climatic Zone of India, Climate and comfort, Earth and its motion, Directions and their characteristics, Landscaping.

Orientation of buildings; orientation, Factors affecting orientation, Sun, Wind, Rain, CBRT suggestions orientation criteria for Indian conditions.

UNIT – II:

Principles of planning and Bye Laws of buildings: Aspects, prospect, Privacy, Furniture Requirements, Roominess, Grouping, Circulation, Elegance, Economy, Practical consideration.

Buildings bye Laws; Introduction, Objective, Principles, Applicability of building bye Laws. Introduction to National building code, Objectives, Scope, Structure of NBC. General Building Requirements, Guidelines for Residential Buildings. Building Heights, Setbacks, FAR/FSI. Open Spaces, room sizes, Lighting and Ventilation, Means of Access and service ducts. Classification of buildings for fire safety.

UNIT - III:

Introduction to building construction and site preparation; components of Building, Foundations: Functions & Requirements, Types of Shallow Foundations: isolated footings, combined footings, strap footings, wall footings, raft foundations, Types of Deep Foundations: driven piles (timber, precast concrete, steel), bored cast-in-situ piles. Brick masonry – types – bonds; Stone masonry – types.

UNIT - IV:

Floors, Roofs, Stairs, Doors, Windows: Types of floors – Ground and upper floors – Brick flooring, Cement concrete flooring, Stone flooring, Tiled flooring, Types of roofs – Flat, Pitched, Sloped, Curved roofs Components and classification of staircases – Straight flight, Dog-legged, Open well, Spiral staircases –Types of doors – Panelled, Flush, Glass, PVC, Aluminium, Steel, Sliding, Revolving, Collapsible, and Rolling shutter doors – Door frame materials and fittings. Types of windows.

UNIT - V:

Finishing Works: Plastering – Purpose, types, tools and techniques – Defects in plastering. Pointing – Types and application areas – Differences between plastering and pointing.

Scaffolding, Formwork, and Centering: Scaffolding – Definition, purpose, components – Types: Single, Double, Cantilever, Suspended, Trestle, Steel and patented scaffolds – Safety considerations. Formwork – Functions, materials (timber, steel, aluminum, plastic), formwork for slabs, beams, columns, and walls – Centering: Definition and role in arches and domes.

5. TEXT BOOKS

PYTHON PROGRAMMING								
I Year - II Semester: CE / ME								
Course Code	Category	Hours/Week			Credits	Maximum Marks		
CS205ES	Foundation	L	T	P	C	CIA	SEE	Total
		3	-	-	3	40	60	100
Contact Classes: 48	Tutorial Classes: Nil	Practical Classes: Nil				Total Classes: 48		
Prerequisite: Basic knowledge of computer fundamentals, C programming.								

1. COURSE OVERVIEW

This course provides a comprehensive introduction to Python programming, designed for beginners and those looking to strengthen their coding skills. You will learn fundamental programming concepts, syntax, and practical applications of Python in various fields such as web development, data analysis, automation, and more.

2. COURSE OBJECTIVE

The students will try to Learn:

Introduce the fundamentals of Python programming for problem-solving.

- 1) Develop skills to write structured, modular, and efficient Python code.
- 2) Enable students to use Python's built-in data structures and libraries effectively.
- 3) Provide knowledge on file handling, exception handling, and object-oriented programming in Python.
- 4) Equip students with the ability to apply Python for real-world applications including data processing and automation.

3. COURSE OUTCOMES

After successful completion of the course, students should be able to:

CO 1	Write Python programs using variables, operators, expressions, and control structures.
CO 2	Implement Python programs using built-in data structures like lists, tuples, sets, and dictionaries.
CO 3	Apply modular and object-oriented programming principles in Python.
CO 4	Handle files, exceptions, and apply Python libraries for problem-solving.
CO 5	Develop small-scale applications in Python for automation and data manipulation.

4. COURSE CONTENT

UNIT - I:

(10L)

Introduction to Python and Basics of Programming Introduction to Python: Features, Applications, Installation, IDEs, Python Syntax, Indentation, Comments, Variables, Data Types, Type Casting, Operators: Arithmetic, Relational, Logical, Assignment, Membership, Identity, Bitwise, Input/Output functions (input(), print()), Control Structures: if, if-else, if-elif-else, Nested Conditions, Looping: for, while, Nested Loops, break, continue, pass.

UNIT - II:

(10L)

Data Structures in Python Strings: Creation, Indexing, Slicing, Methods, String Formatting, Lists: Creation, Indexing, Slicing, List Comprehension, Methods, Tuples: Properties, Indexing, Methods, Sets: Creation, Operations, Methods, Dictionaries: Creation, Access, Methods, Dictionary Comprehension, Iterating over data structures.

UNIT – III**(10L)**

Functions and Modules Functions: Defining, Calling, Parameters, Return Values, Types of Arguments: Positional, Keyword, Default, Variable Length, Scope of Variables: Local and Global, Lambda Functions, Map, Filter, Reduce, Recursion in Python, Modules: Importing, Creating User-defined Modules, Standard Modules (math, random, datetime), Packages in Python.

UNIT - IV:**(9L)**

File Handling and Exception Handling File Handling: Opening, Reading, Writing, Appending, File Modes, File Methods, Working with CSV and JSON Files, Exception Handling: try, except, else, finally, Built-in Exceptions, Raising Exceptions, Introduction to Regular Expressions (re module).

UNIT - V:**(9L)**

Object-Oriented Programming and Applications OOP Basics: Classes, Objects, Attributes, Methods, Constructor (`__init__`), self keyword, Inheritance: Single, Multiple, Multilevel, Hierarchical, Method Overriding, Method Overloading (conceptual), Encapsulation and Polymorphism, Application Development: Data Processing Script, Basic Calculator, File Organizer, Simple Data Analysis with pandas.

5. TEXT BOOKS

- 1) Python Programming: Using Problem Solving Approach by Reema Thareja.
- 2) Python Crash Course by Eric Matthes, Learning Python by Mark Lutz.

6. REFERENCE BOOKS

- 1) Introduction to Python Programming by Gowrishankar S., Veena A.
- 2) Python Cookbook by David Beazley and Brian K. Jones.
- 3) Fluent Python by Luciano Ramalho, Automate the Boring Stuff with Python by Al Sweigart.

APPLIED CHEMISTRY								
I Year - I Semester: CSE								
I Year - II Semester: CE, ME, ECE, CSE(AI ML), CSE(DS)								
Course Code	Category	Hours/Week			Credits	Maximum Marks		
CH206BS	Foundation	L	T	P	C	CIA	SEE	Total
		3	-	-	3	40	60	100
Contact Classes: 48	Tutorial Classes: Nil	Practical Classes: Nil				Total Classes: 48		
Prerequisite: Basic principles of Chemistry								

1. COURSE OVERVIEW

Engineering Chemistry Course, focuses on the chemical principles and technologies relevant to engineering and industry. It covers water chemistry and treatment methods, electrochemical processes, batteries, corrosion mechanisms and control techniques, and the application of smart materials and biosensors. The course also explores challenges and future opportunities in sustainable energy solutions, particularly green hydrogen.

2. COURSE OBJECTIVE

The students will try to Learn:

- 1) The new advances in Engineering Chemistry and acquire the essential skills to become a competent engineering professional.
- 2) The industrial significance of water treatment, fundamental principles of battery chemistry, and the impact of corrosion along with its control methods for structural protection.
- 3) The foundational knowledge of various energy sources and their practical applications in engineering and classification, properties, and engineering applications of polymers for material selection and industrial advancements.
- 4) The working of smart materials, biosensors, and analytical techniques applicable in engineering, industrial, environmental, and biomedical fields.

3. COURSE OUTCOMES

After successful completion of the course, students should be able to:

CO 1	Understand the fundamental properties of water and its applications in both domestic and industrial purposes.
CO 2	Gain basic knowledge of electrochemical processes and their relevance to corrosion and its control methods.
CO 3	Comprehend the significance and practical applications of batteries and various energy sources, enhancing their potential as future engineers and entrepreneurs.
CO 4	The basic concepts and properties of polymers, lubricants and other engineering materials.
CO 5	Apply the principles of UV-Visible, IR spectroscopy and Raman spectroscopy in analyzing pollutants in dye industries and biomedical applications.

4. COURSE CONTENT

UNIT – I: Water and its treatment: [8]

Introduction, types of hardness and units– Estimation of hardness of water by complexometric method - Numerical problems. Potable water and its specifications (WHO) - Steps involved in the treatment of potable water – Disinfection of potable water by chlorination and break-point chlorination. Defluoridation - Nalgonda technique.

Boiler troubles: Scales, Sludges and Caustic embrittlement. Internal treatment of boiler feed water - Calgon conditioning, Phosphate conditioning, Colloidal conditioning. External treatment methods - Softening of water by ion- exchange processes. Desalination of brackish water - Reverse osmosis.

UNIT – II: Electrochemistry and Corrosion [8]

Introduction - Electrode potential, standard electrode potential, types of electrodes, Nernst equation (no derivation), Galvanic cell, cell representation, EMF of cell- Numerical problems. Reference electrodes - Primary reference electrode – Standard Hydrogen Electrode (SHE), Secondary reference electrode - Calomel electrode. Determination of pH of an unknown solution using SHE and Calomel electrode.

Corrosion: Introduction - Definition, causes and effects of corrosion - Theories of corrosion, chemical and electrochemical corrosion - Mechanism of electrochemical corrosion, Types of corrosion: galvanic, water-line and pitting corrosion. Factors affecting rate of corrosion - Nature of the metal, Nature of the corroding environment. Corrosion control methods - Cathodic protection Methods - Sacrificial anode and impressed current methods.

UNIT - III: Energy Sources: [8]

Batteries: Introduction – Classification of batteries - Primary, secondary and reserve batteries with examples. Construction, working and applications of Zn-air and Lithium ion battery. Fuel Cells – Differences between a battery and a fuel cell, construction and applications of Direct Methanol Fuel Cell (DMFC).

Fuels: Introduction and characteristics, Calorific value of fuel - HCV, LCV- Dulong's formula –Numerical problems.

Fossil **fuels**: Introduction, classification, Petroleum - Refining of Crude oil, Cracking - Moving bed catalytic cracking. LPG and CNG - composition and uses.

Synthetic Fuels: Fischer-Tropsch process, Introduction and applications of Hythane and Green Hydrogen.

UNIT - IV: Polymers: [8]

Definition, classification of polymers: Based on origin and tacticity with examples - Types of polymerization - Addition (free radical addition mechanism) and condensation polymerization.

Plastics, Elastomers and Fibers: Definition and applications (PVC, Buna-S, Nylon-6,6).

Thermoplastics and thermosetting plastics, Fiber reinforced plastics (FRP).

Conducting polymers: Definition and classification with examples - Mechanism of conduction in trans-Polyacetylene and applications of conducting polymers.

Biodegradable polymers: Polylactic acid (PLA) and its applications.

UNIT - V: Applications of Materials: [8]

Cement: Portland cement, its composition, setting and hardening.

Phase rule: Definition – Phase, component, degrees of freedom. Phase rule equation. Phase diagrams - One component system - water. Two component system - Lead silver system.

Lubricants: Definition and characteristics of a good lubricant – thin film mechanism of lubrication, properties of lubricants - viscosity, cloud and pour point, flash and fire point.

Interpretative spectroscopic applications of UV-Visible spectroscopy for Analysis of pollutants in dye industry, IR spectroscopy in night vision-security, Pollution Under Control- CO sensor (Passive Infrared detection).

5. TEXT BOOKS

- 1) Engineering Chemistry by P.C. Jain and M. Jain, Dhanpatrai Publishing Company, 2010.
- 2) Engineering Chemistry by Rama Devi, Dr.P.Aparna and Rath, Cengage learning, 2025.
- 3) Engineering Chemistry: by Thirumala Chary Laxminarayana & Shashikala, Pearson Publications (2020).
- 4) Engineering Chemistry by Shashi Chawla, Dhanpatrai and Company (P) Ltd. Delhi 2011.
- 5) Engineering Analysis of Smart Material Systems by Donald J. Leo, Wiley, 2007.
- 6) Raman Spectroscopy in Human Health and Biomedicine.

6. REFERENCE BOOKS

- 1) Engineering Chemistry: by Thirumala Chary Laxminarayana & Shashikala, Pearson Publications (2020)
- 2) Engineering Chemistry by Shashi Chawla, Dhanpatrai and Company (P) Ltd. Delhi 2011.
- 3) Engineering Analysis of Smart Material Systems by Donald J. Leo, Wiley, 2007.

COURSE CONTENT

ELEMENTS OF ELECTRICAL AND ELECTRONICS ENGINEERING LAB								
I Year - II Semester: CE / ME								
Course Code	Category	Hours/Week			Credits	Maximum Marks		
EC207ES	Foundation	L	T	P	C	CIA	SEE	Total
		-	-	2	1	40	60	100
Contact Classes: Nil	Tutorial Classes: Nil	Practical Classes: 32				Total Classes: 32		
Prerequisite: Nil								

1. COURSE OVERVIEW

Course is about to design and analyze Analog circuits and systems using fundamental principles of Electronic Devices.

2. COURSE OBJECTIVE

The students will try to Learn:

- 1) To understand magnetic circuits, DC circuits and AC single phase and three phase circuits.
- 2) To study and understand the different types of DC, AC machines and Transformers.
- 3) To import the knowledge of various electrical installations.
- 4) To introduce the concept of power, power factor and its improvement.
- 5) To introduce the concepts of diodes and transistors, and
- 6) To impart the knowledge of various configurations, characteristics and applications.

3. COURSE OUTCOMES

After successful completion of the course, students should be able to:

CO 1	To analyze and solve electrical circuits using network laws and theorems.
CO 2	To understand and analyze basic Electric and Magnetic circuits
CO 3	To study the working principles of Electrical Machines
CO 4	To introduce components of Low Voltage Electrical Installations
CO 5	To identify and characterize diodes and various types of transistors.

4. LIST OF EXPERIMENTS/DEMONSTRATIONS:

1) PART A: ELECTRICAL

- 1) Verification of KVL and KCL
- 2) (i) Measurement of Voltage, Current and Real Power in primary and Secondary Circuits of a Single-Phase Transformer (ii) Verification of Relationship between Voltages and Currents (StarDelta, DeltaDelta, Delta Star, StarStar) in a Three Phase Transformer
- 3) Measurement of Active and Reactive Power in a balanced Three phase circuit.
- 4) Performance Characteristics of a Separately Excited DC Shunt Motor
- 5) Performance Characteristics of a Three phase Induction Motor
- 6) No Load Characteristics of a Three phase Alternator

2) PART B: ELECTRONICS

- 1) Study and operation of (i) Multimeters (ii) Function Generator (iii) Regulated Power Supplies (iv) CRO.
- 2) P-N Junction diode characteristics
- 3) Zener diode characteristics and Zener as voltage Regulator
- 4) Input and Output characteristics of Transistor in CB, CE configuration
- 5) Full Wave Rectifier with and without filters
- 6) Input and Output characteristics of FET in CS configuration

5. REFERENCE BOOKS

- 1) Lab manual for Analog Circuits.

6. MATERIALS ONLINE

COURSE CONTENT

APPLIED CHEMISTRY LABORATORY								
I Year - I Semester: CSE								
I Year - II Semester: ECE, CE, ME, CSE(AI&ML), CSE(DS)								
Course Code	Category	Hours/Week			Credits	Maximum Marks		
CH208BS	Foundation	L	T	P	C	CIA	SEE	Total
		-	-	2	1	40	60	100
Contact Classes: Nil	Tutorial Classes: Nil	Practical Classes: 32				Total Classes: 32		
Prerequisite: Basic principles of chemistry								

1. COURSE OVERVIEW

This laboratory course equips B. Tech students with practical skills in key chemical analysis techniques such as volumetric analysis, conductometry, potentiometry, and pH measurement, enabling precise quantification of chemical substances. It also includes experiments on polymer preparation, corrosion rate determination, and lubricant property evaluation. Additionally, virtual lab sessions introduce students to advanced topics like fuel cells, smart biomedical materials, electric vehicle batteries, and solar cell applications, bridging theoretical knowledge with modern technological advancements and fostering a comprehensive understanding of chemistry's role in engineering.

2. COURSE OBJECTIVE

The students will try to Learn:

- 1) The core chemical principles relevant to engineering applications.
- 2) The water hardness estimation method to assess its suitability for drinking purposes.
- 3) The ability to perform acid-base titrations using instrumental methods such as conductometry, potentiometry, and pH metry.
- 4) The hands-on synthesis of polymers, specifically Bakelite and Nylon – 6, 6, gaining practical experience in polymer preparation techniques in the laboratory.

3. COURSE OUTCOMES

After successful completion of the course, students should be able to:

CO 1	Perform volumetric analysis by estimating water hardness using complexometry
CO 2	Develop skills in conductometric techniques to determine the concentration of acids.
CO 3	Gain practical experience in potentiometric analysis in to estimate acid concentration and also Iron(II) from the given samples
CO 4	Understand and apply pH metry techniques to determine acid concentrations
CO 5	Acquire hands-on experience in polymer synthesis by preparing Bakelite and Nylon-6,6 in the laboratory.
CO 6	Explore corrosion measurement methods, lubricant property evaluation, and virtual labs on renewable energy technologies, smart materials, and battery applications to bridge theoretical concepts with modern engineering applications.

4. LIST OF EXPERIMENTS / DEMONSTRATIONS:

- 1) Volumetric Analysis: Estimation of Hardness of water by EDTA Complexometry method.
- 2) Conductometry:
 - a) Estimation of the concentration of strong acid by Conductometry.
 - b) Estimation of the concentration of strong and weak acid in an acid mixture by Conductometry.

PYTHON PROGRAMMING LAB								
I Year - II Semester: CE								
Course Code	Category	Hours/Week			Credits	Maximum Marks		
CS209ES	Foundation	L	T	P	C	CIA	SEE	Total
		-	-	2	1	40	60	100
Contact Classes: Nil	Tutorial Classes: Nil	Practical Classes: 32				Total Classes: 32		
Prerequisite: Nil								

1. COURSE OVERVIEW

The course focuses on practical Python programming skills through a series of progressively challenging tasks. In the initial weeks, students get familiar with Python basics, including using the interpreter, writing simple programs, and understanding basic functions. As the course advances, students work on more complex problems like matrix operations, file handling, and implementing algorithms. They also explore object-oriented programming concepts, exception handling, and basic GUI development. The course culminates with applications in numerical computing and digital logic, preparing students for real-world problem-solving scenarios.

2. COURSE OBJECTIVE

The students will try to Learn:

- 1) To install and run the Python interpreter.
- 2) To learn control structures.
- 3) To Understand Lists, Dictionaries in python.
- 4) To Handle Strings and Files in Python.

3. COURSE OUTCOMES

After successful completion of the course, students should be able to:

CO 1	Develop the application specific codes using python.
CO 2	Understand Strings, Lists, Tuples and Dictionaries in Python
CO 3	Verify programs using modular approach
CO 4	Verify programs using file I/O, Python standard library
CO 5	Implement Digital Systems using Python

4. LIST OF EXPERIMENTS:

- 1)
 - a) Use a web browser to go to the Python website <http://python.org>. This page contains information about Python and links to Python-related pages, and it gives you the ability to search the Python documentation.
 - b) Start the Python interpreter and type help () to start the online help utility.
- 2) Start a Python interpreter and use it as a Calculator.
- 3) Write a program to calculate compound interest when principal, rate and number of periods are given.

- 4) Read the name, address, email and phone number of a person through the keyboard and print the details.
- 5) Print the below triangle using for loop.

```
5
4 4
3 3 3
2 2 2 2
1 1 1 1 1
```

- 6) Write a program to check whether the given input is digit or lowercase character or uppercase character or a special character (use 'if-else-if' ladder)
- 7) Python program to print all prime numbers in a given interval (use break)
- 8) Write a program to convert a list and tuple into arrays.
- 9) Write a program to find common values between two arrays.
- 10) Write a function called palindrome that takes a string argument and returns True if it is a palindrome and False otherwise. Remember that you can use the built-in function len to check the length of a string.
- 11) Write a function called is sorted that takes a list as a parameter and returns True if the list is sorted in ascending order and False otherwise.
- 12) Write a function called has duplicates that takes a list and returns True if there is any element that appears more than once. It should not modify the original list.
- 13) Write a function called remove duplicates that takes a list and returns a new list with only the unique elements from the original. Hint: they don't have to be in the same order.
- 14) The wordlist I provided, words.txt, doesn't contain single letter words. So you might want to add "I", "a", and the empty string.
- 15) Write a python code to read dictionary values from the user. Construct a function to invert its content. i.e., keys should be values and values should be keys.
- 16) Add a comma between the characters. If the given word is 'Apple', it should become 'A,p,p,l,e'
- 17) Remove the given word in all the places in a string?
- 18) Write a function that takes a sentence as an input parameter and replaces the first letter of every word with the corresponding upper case letter and the rest of the letters in the word by corresponding letters in lower case without using a built-in function?
- 19) Writes a recursive function that generates all binary strings of n-bit length
- 20) Write a python program that defines a matrix and prints
- 21) Write a python program to perform multiplication of two square matrices
- 22) How do you make a module? Give an example of construction of a module using different geometrical shapes and operations on them as its functions.
- 23) Use the structure of exception handling all general-purpose exceptions.
- 24) Write a function called draw_rectangle that takes a Canvas and a Rectangle as arguments and draws a representation of the Rectangle on the Canvas.
- 25) Add an attribute named color to your Rectangle objects and modify draw_rectangle so that it uses the color attribute as the fill color.
- 26) Write a function called draw_point that takes a Canvas and a Point as arguments and draws a representation of the Point on the Canvas.
- 27) Define a new class called Circle with appropriate attributes and instantiate a few Circle objects. Write a function called draw_circle that draws circles on the canvas.
